Protection from Bow Thruster & Propeller Scour

Quaywall Protection & Stabilisation

Port, Harbour & Marina Protection

HARBOUR PROTECTION & STABILISATION

Anti-scour & stabilisation solutions for ports and harbours

Busy ports and harbours are often subject to scour erosion from vessels berthed there. Force from bow thrusters and propellers can cause quay walls and riverbeds to get washed away putting the infrastructure at risk.

Pipeshield design, manufacture and supply multiple solutions to prevent these problems. Our in-house design team can discuss the problem faced and advise which of our many products can solve the issue taking into consideration -

- Cost
- Installation
- Long-term Solutions

Features & Benefits

- Multiple solutions to fit within budget and fulfil long-term results
- Quick release systems for hire providing safe, simple installation
- Patented N2 Edge design concrete mattresses designed to eliminate edge roll under force

WE'VE GOT IT COVERED.

CONCRETE MATTRESSES

Pipeshield design, manufacture and supply various designs of concrete mattress including the patented N2 edge design. The mattresses can provide protection and stabilisation to both the quay wall, foundations and riverbed reducing dredging requirements & costs.

PRECISE ROCK PLACEMENT UNITS (PRP)

Pipeshield's PRP Precise Rock Placement units are available in 2T and 4T. With a single point lift and easy installation, these units offer a simple and more cost effective solution to rock dumping.

FABRIC FORMWORKS, SAND & GROUT

Pipeshield have a wide range of fabric formwork solutions for specific applications. We can also provide sand, gravel and grout bags in bulk quantities and supply in bags ranging from 25kg bags to the most common being a 1Te offshore rated bulk-bag with a minimum safety factor of 10:1.
